

2026 CSI Arizona

Forensic Sketch Artist Contest

Witness Statements

Each contestant must complete a Forensic Sketch Artist registration form and submit it along with their sketch prior to **March 30, 2026**. Full submissions (registration form + hard copy of sketch) must be received at the Foundation office by the deadline. Only **one** submission per student will be accepted.

Statement from Witness A

- He was a Caucasian male with hazel green eyes in his twenties or early thirties.
- He had a slim build and was wearing a blue and white striped collared shirt.
- His hair was short, slightly messy, slightly sideswept, and blonde to light brown. His full eyebrows were the same color.
- He also had a darker blonde to brown full beard (AKA a mustache and beard) with small, reddish highlights.
- Freckles and pimples were splattered across his face and neck, with a bloody sore on his bottom lip near the edge of his mouth. His ears were also average-sized.
- He had symmetrical features and no visible body modifications.

Statement from Witness B

- He was a young white man in his 20s at an average weight. I only saw him from the shoulders up, facing me directly. It felt like he was staring at me.
- Red blemishes were concentrated on his cheeks. Some were on his forehead, and others were on his neck.
- He had average-sized, slightly hooded light green eyes. His eyes were close to his eyebrows.
- He had blondish-brown full eyebrows and eyelashes.
- His nose was straight and average sized. There was a slight vertical dent on the tip of his nose.
- His hair was blonde. When I looked at him, I saw the front fringe of his hair was swept to the left. The front fringe slightly covered the forehead, but it did not reach the top of his eyebrows.
- He had a full, red and brown colored beard that came to a slightly rounded point at his chin. The beard was full; the mustache touched his top lip, and - except for the sides of the lip - the beard touched his bottom lip.

- His lips were light pink, with the top lip slightly smaller than the bottom lip. I could see both lips very clearly. They were medium to small in fullness. The top lip was pointed and had a prominent “cupid’s bow.” I saw his bottom lip had a bloody cut near the right side of his mouth.
- His ears were visible when I looked at his face. There were curves on the inside of his ears, and his ears fit between the top of his eyebrow and bottom of his nostrils.
- He wore a blue and white striped button-up shirt. It looked clean and did not have any wrinkles.

Statement from Witness C

- The suspect is a white male with an average build wearing a light blue and white pinstriped button-up collared shirt.
- His eyes were hazel, yellowish towards the middle and dark blueish on the outside. The eyes were somewhat small and set a bit deep. There were slightly dark eyebags under the eyes.
- His eyelashes were long, and his eyebrows were thick but not dense. His eyelashes and eyebrows were the same color as his facial hair.
- I felt like he was staring at me with an odd look on his face. His brows were furrowed in a stern expression. The ratio between the brow line and nose was small compared to their face and ears.
- He had a short beard that was slightly longer on the bottom than the sides. He also had a mustache that was almost brown but not quite. It looked much darker blonde than his head hair. His chin and upper lip were covered in groomed facial hair. His facial hair was medium brown, with red and blonde highlights.
- The moustache was trimmed to touch his upper lip and naturally connect to his beard. The beard was in a long “u-shape” that tapered from about half an inch below the ears and two inches in the middle.
- His hair was in a popular messy style, with it a little longer in the front and very short on the sides. I saw his head hair taper from short around his ears to several inches long on the top. When I looked at him, wisps of hair over his forehead looked pushed to the left. Hair was medium brown at the roots, and the rest looked sun bleached blonde.
- His neck, cheekbones, and forehead had scattered flat moles and reddish-brown splotches across his fair complexion.
- His nose was straight and smallish. I did not see any distinct nose tip.

- His philtrum formed distinct peaks on their top lip (AKA “cupid’s bow”). I noticed his bottom lip was split and bloody on the right side.
